

Week 1 — Design Workflow Orientation

Today's focus

- Orient to the UCD / Design Thinking workflow used in this subject
- Review selected digital media examples as a group
- Draft an initial user problem (people + constraint, not a product pitch)

Roles (assign before Activity 1)

Role	Name
Facilitator (time & turn-taking)	
Note-taker	
Presenter (2-min share-out)	

Activity 1 — Example walkthrough (25 min)

Pick **one** digital media product or service your group knows well (app, streamer, LMS, social platform, game UI).

Field	Group notes
Product / platform	
Primary user goal	
One visible friction or pain	
Where it sits in the UCD loop (empathise / define / ideate / prototype / test)	

Steps

1. Each member names one friction in 60 seconds.
2. Facilitator clusters overlaps on the whiteboard / shared doc.
3. Agree on **one** friction to carry into Activity 2.

Activity 2 — Strong problem framing (35 min)

Rewrite the friction as a **human-centred problem statement**.

Weak: "Build a better [product]."

Strong: "[User group] struggle to [goal] when [constraint], which leads to [consequence]."

Draft	Text
User group	
Goal	
Constraint / context	
Consequence	
One-sentence problem	

Activity 3 — Workflow map (20 min)

List what evidence you would need **next** if this problem became your semester project.

Stage	What we would do next week	Artefact we expect
Empathise		
Define		
Ideate		
Prototype		
Test
