

Week 3 — Interface Critique: Accessibility & Legibility

Today's focus

- Run a lightweight accessibility + legibility audit on one interface
- Separate **compliance-style checks** from **lived barriers**
- Leave with short analytical notes usable for Assignment 1 practice

Roles

Role	Name
Facilitator	
Auditor A (structure / labels)	
Auditor B (legibility / motion / contrast)	
Presenter	

Activity 1 — Target selection (10 min)

Field	Notes
Interface / page / flow	
Critical user task	
Who might be excluded if this fails?	

Activity 2 — Quick audit checklist (45 min)

Mark **Pass** / **Fail** / **Unsure**. Add one evidence note per Fail.

Check	P / F / U	Evidence note
Text contrast readable at arm's length		
Headings / landmarks make structure clear		
Interactive targets large enough / spaced		
Focus / selection state visible		
Labels match control purpose		
Error messages explain how to recover		
Motion / autoplay can be paused or ignored		
Icons alone are not the only cue		

Activity 3 — Legibility deep dive (25 min)

Question	Group answer
What is the primary message on first view?	
What competes with that message?	
One typography / spacing / hierarchy change	
One wording change that would reduce cognitive load	

Activity 4 — Analytical notes (20 min)

Write **three** sentences max for the class pad / group doc:

1. Claim (what fails or succeeds)
2. Evidence (where / for whom)
3. Design implication (what to change)
